

ELECTROLUX PROFESSIONAL • GENERATION 7000

The Compact Power

Small spaces. Ultimate performance. A fully professional washer and dryer for laundry rooms where every square metre counts.

Professional laundry, now in a compact footprint

Until now, many small businesses have had to choose between professional equipment that doesn't fit and domestic machines that aren't built for the job. The Compact Power is Electrolux Professional's answer: a fully professional washer and dryer, stackable, available in 6, 7 and 8 kg capacities in one compact chassis.

Built for businesses like yours

- ✓ Tight spaces and small laundry rooms
- ✓ Small businesses with big laundry needs
- ✓ Busy operations that can't wait for laundry
- ✓ Sites that need hygiene you can prove
- ✓ Owners who want low running costs and a long-term investment

What you get

- ✓ The fastest dry-to-dry cycle on the market, according to Electrolux Professional
- ✓ Lowest cost per cycle over the machine's life
- ✓ Swedish engineering and Ergocert five-star certified ergonomics
- ✓ Smart connectivity with OnE Connected

Lowest cost per cycle

The price you pay up front is only the tip of the iceberg. Over a machine's life, around 90% of the cost is running costs: water, energy and chemicals. The Compact Power is designed to keep that part small.

Less water

Around 24% less water on average than the previous Electrolux Professional generation — about 10 litres saved every cycle.

Less energy

14% less washer energy than the previous generation. Better water extraction saves energy in the dryer too.

Less time

600G spin and less than 40% moisture left in the laundry, so drying is quicker. Electrolux Professional claims the fastest wash, fastest dry and fastest dry-to-dry on the market.

A ladder of savings in the dryer

Saving	How
+15%	Moisture balance. Laundry comes out of the washer drier (<40% residual moisture), so the dryer does less work.
up to 65%	Heat pump (M.E.M.E. — Minimum Energy, Maximum Efficiency). Patented heat pump with electronic valve and inverter technology.
up to 8%	Load Intelligence and EcoProgram. The dryer knows how full the drum is and adjusts. The first dryer on the market with integrated load intelligence.

Dryer savings compared with the previous Electrolux Professional Line6000 range. Actual savings depend on programmes, loads and site conditions.

Built to last: 40,000 cycles

Electrolux Professional describes The Compact Power as the first on the market to guarantee 40,000 cycles — around 10,000 more than the typical 30,000, at the same initial cost. That means a lower equipment cost per wash and dry, and fewer replacements. With the **ReLife Program**, a washer can be taken on to **80,000 cycles** once it reaches 40,000 (subject to programme availability).

Smart technology, Swedish engineering

Automatic, AI-inspired technology does the thinking, so every programme uses only what it needs.

Xtracta40 technology

Less than 40% residual moisture for the fastest dry-to-dry, while protecting fabrics.

UltraG Spin Core

600G extraction cuts cycle times and increases throughput.

Dynamic Counterbalance Intelligence **UNIQUE**

Adjusts spin speed automatically throughout extraction for the best possible water removal.

FlowDrum design & IntelMesh

Smart water flow for low water use, with stainless steel drum lifters for deep cleaning and gentle fabric care.

Minimum Water Use

Automatic load detection means each programme uses only the water the load needs.

Intelligent Dosing

Exactly the right amount of detergent for every programme and load (with automatic dosing pumps).

LintLess design **PATENTED**

Smooth water flow with no lint build-up, for consistent washing and fewer service calls.

Force Control Platform **PATENTED**

Heavy-duty absorbers and suspension built to handle the highest G-forces, day after day.

Designed around the people who use it

Every machine is Ergocert certified for ergonomics and human-centred design.

- **UniVibe touch interface **PATENTED**** — the same simple screen on washer and dryer. One screen, one place, one touch.
- **Dual Door Handle **PATENTED**** — easy grip for left- or right-handed users, 180° opening, no extra force needed.
- **Door damper **PATENTED**** — holds the door open and steady while you load.
- **Wide double-glass door** — easier loading and a cooler touch.
- **EPROD5 detergent drawer** — front pull-out, five colour-coded compartments, removable for cleaning.
- **Dryer safety and comfort** — integrated heat sensor and sealed motor to prevent overheating, silent mode, soft-close magnetic door, horizontal filter drawer that's easy to reach at any height.

OnE Connected: your laundry at your fingertips

- **See everything.** Machine status, usage, cycle logs and load factor on one platform. Monitor water, detergent and energy use to control costs.
- **Prove your hygiene.** For care settings, every disinfection cycle is logged automatically, with alerts if a cycle fails and reports for your records.
- **Less downtime.** Remote diagnostics and over-the-air software updates (on selected models) mean faster, better-planned service.
- **Secure and open.** Certified to ISO 27001 for information security. Cloud-to-cloud APIs connect machine data to your own systems or payment platforms.

Where The Compact Power fits

Stack as many as you need, or keep to the essentials for the tightest spaces. Either way, performance is guaranteed.

Hotels, B&Bs & hospitality

Care homes & nurseries

Apartments & student housing

Facility management

Spas, gyms & salons

Marine

Small businesses

Hairdressers, salons, bakeries, cafés — professional results in a limited space.

Care & hospitality

Hygiene validation, high cleaning results and quiet, easy operation.

Shared & self-service

Compact, high throughput and low running costs, with payment app options.
